

Tom's MB Hex Head Bolt Survey

Please mark only bolts that appear to be original, and return this form to me either as this xls file updated, or as a hardcopy to the address at the bottom. I will post the results on G503 as soon as I get 5 or 10 replies. Use bright light and magnifying glass if you have one handy. You may add any other interesting bolts you might see at bottom of list if you want. Don't spend too much time, if the marking on the head is not clear, or it is obviously not original, go on the next one. This survey covers exposed body bolts. Chassis and engine bolts are of less interest because engines and drive train components were almost always changed by the time MBs were surplused. All directions as if sitting in drivers seat, facing forward.

Instructions:

For each original bolt found, please put a **X** in the appropriate box. If not sure it is original, please put a **Q** (questionable) in the box. If you want to indicate that in your experience there should be a particular bolt always used in a certain location, put an **E** (experience) in the box. (For example, on slatgrills, TR20 bolts are always used on the headlight hinges and hood catches in my experience. If my slatgrill had them, I would put an X, if it did not, but I wanted to indicate I have seen TR20s used there on many other slatgrills of the same era, I would put an E in addition to marking whatever bolt I found in that location with an X, in order pass on my knowledge)

You don't have to fill in this entire form...
